

# DAMEXPLORER

DamExplorer is a tool which allows inspection and exploration of any part of a dam.

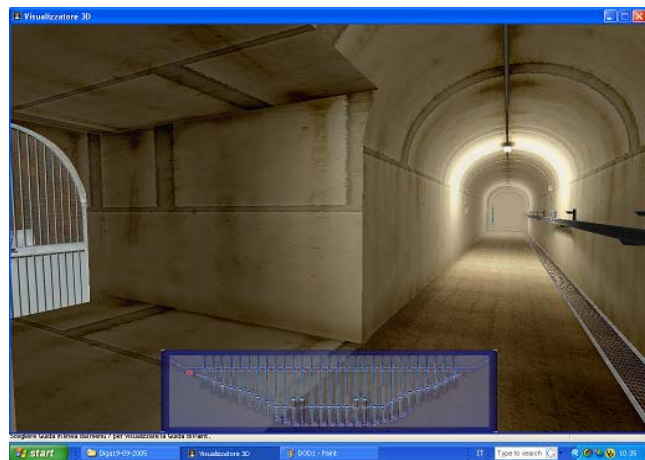

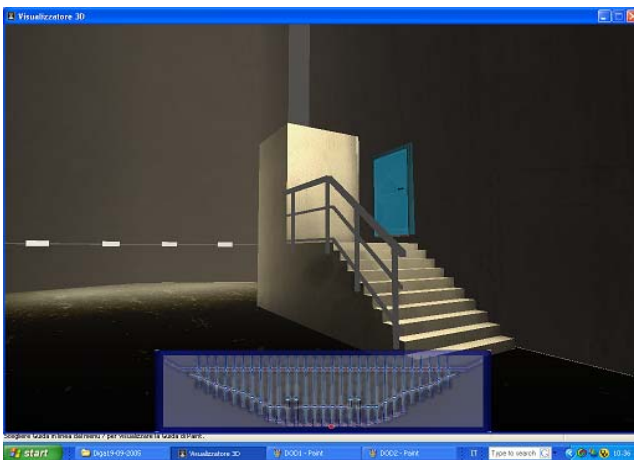

Thanks to a 3D graphic model which reproduces the structure of the dam and using simple commands from the keyboard and mouse, you can surf anywhere within your dam.

Not only that, by a simple connection with the database you can check the measurements being taken and the status

of any instruments, interrogate the data acquisition units and obtain an overview of the entire structure in real time.

DamExplorer combines the advantage of being at a dam with the comfort of sitting in front of your PC while enjoying the high definition of a video game.

Because the simulator is built around specialised 3D coding, the programme can be installed on any PC, provided that it is equipped with a minimum 128 MB video card.

Before attempting to install the software please ensure your equipment meets the minimum system requirements

### MINIMUM SYSTEM REQUIREMENTS

DAMEXPLORER	
Processor	Pentium IV or AMD equivalent
Operating System (Microsoft)	Windows 2000, NT, XP Professional SP2
RAM	512 Mb
Video Card	Minimum resolution 1024x768 1000 colours
